Ride Statistics by Origin Zone

The table below looks at weekly ride statistics by the general zone in which the ride originated. Not all origin "zones" are included in this table. Statistics presented are the total number of passengers originating in that zone, average time between requested pickup and scheduled pickup, called "Pickup Lag", and the average ride rating, out of five (5) stars. All statistics are from 8/20 to 8/26 and only include completed rides.

Future analysis could be done to compare cost-per-mile in areas with longer pickup lags, like Jeremy Ranch, Summit Park, and Silver Springs. Comparing pickup lag times by zone for unaccepted Micro ride proposals (once data is available) would also be useful.

Origin Zone	Passengers In-Zone	Avg. Pickup Lag	Avg. Ride Rating
Canyons Village	370	12.8 minutes	4.91 stars
Jeremy Ranch	54	18.1 minutes	4.67 stars
Kimball Junction	1,249	11.81 minutes	4.89 stars
Pinebrook & Ecker Hill	352	11.83 minutes	4.90 stars
Quinn's Junction	28	16.43 minutes	5.00 stars
Silver Creek	33	19.37 minutes	4.83 stars
Silver Springs	144	16.17 minutes	4.89 stars
Summit Park	53	18.10 minutes	5.00 stars
Trailside	139	15.98 minutes	4.72 stars
