

High Valley Transit

Weekly Data Reporting, 101 Spiro: 3/21/22 to 3/27/22

Estimated Ridership

Estimation Logic: We estimate ridership by first setting a threshold for “valid” passenger data; we set this threshold as 80 passengers per day. This means an APC must record at least 80 passengers in a day to be counted as valid data. Then, we average all instances of valid APC data and use this to estimate what happened on buses without APCs. We assume an average of 5.5 buses in operation per day.

Total Estimated Passengers: 14,046

Stop Analysis

Average boardings/alights per stop, per run.

Boardings (Avg. Boardings per Stop)

1. Fresh Market (4.3)
2. Snow Park Lodge (2.5)
3. Canyons Village Transit Hub (2.3)

Alights (Avg. Alights per Stop)

1. OTTC (4.3)
2. PC Mountain (4.1)
3. Canyons Village Transit Hub (4.0)

OTP by Stop, 3/21/22 to 3/27/22
