

# High Valley Transit

Weekly Data Reporting, 101 Spiro: 4/11/22 to 4/17/22

## Estimated Ridership

**Total Estimated  
Passengers:  
5,372**

## Stop Analysis

*Average boardings/alights per stop, per run.*

### Boardings (Avg. Boardings per Stop)

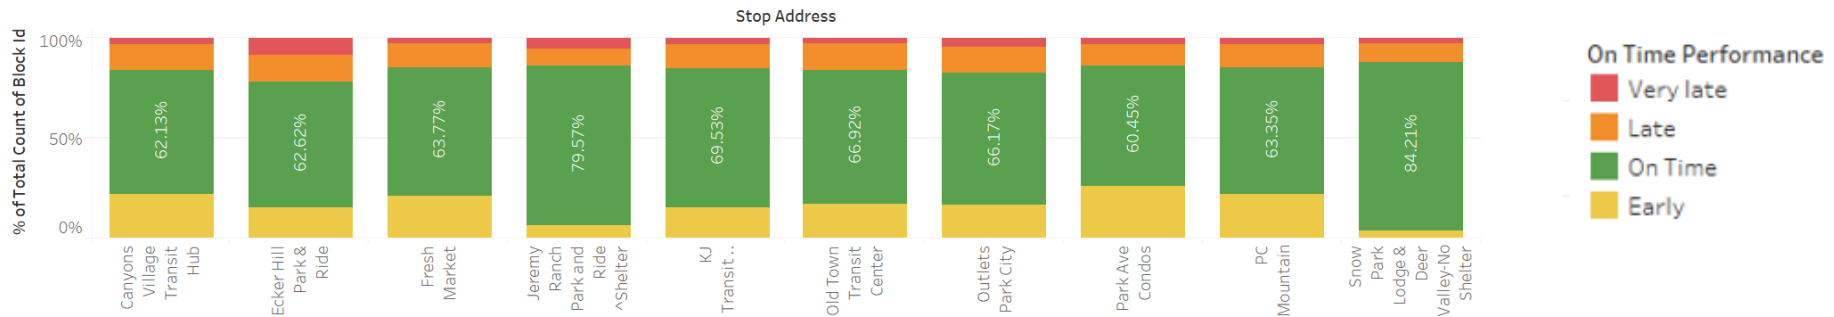

1. Fresh Market (2.3)
2. Park Ave Condos (0.8)
3. Canyons Village Transit Hub (0.8)

### Alights (Avg. Alights per Stop)

1. OTTC (1.5)
2. Park Ave Condos (1.2)
3. PC Mountain (1.1)

**Estimation Logic:** We estimate ridership by first setting a threshold for “valid” passenger data; we set this threshold as 80 passengers per day. This means an APC must record at least 80 passengers in a day to be counted as valid data. Then, we average all instances of valid APC data and use this to estimate what happened on buses without APCs. We assume an average of 5.5 buses in operation per day.

## OTP by Stop, 4/11/22 to 4/17/22

## OTP by Day, 4/11/22 to 4/17/22
